

BeSS report – April 2019

Data compiled by Valérie Desnoux – H-alpha monitoring

- 59 stars were observed
- 16 Observers contributed this month
- 147 Spectra

Observers...

Observateur	Nb spec
Stiewing	33
Bryssinck	21
Charbonnel	20
HOUPERT	14
Guarro Fló	10
Graham	10
Bohlsen	9
de Bruin	7
Desnoux	6
Buil Desnoux	4
Heathcote	4
VERILHAC Cochard GARDE	3
GARDE	3
Martineau	1
ladevaia	1
KREIDER	1
Total général	147

Events of the month...

EE: Emission Event, ME: Moderate Events, DE: Decreasing Event

Emission decrease of H-alpha line

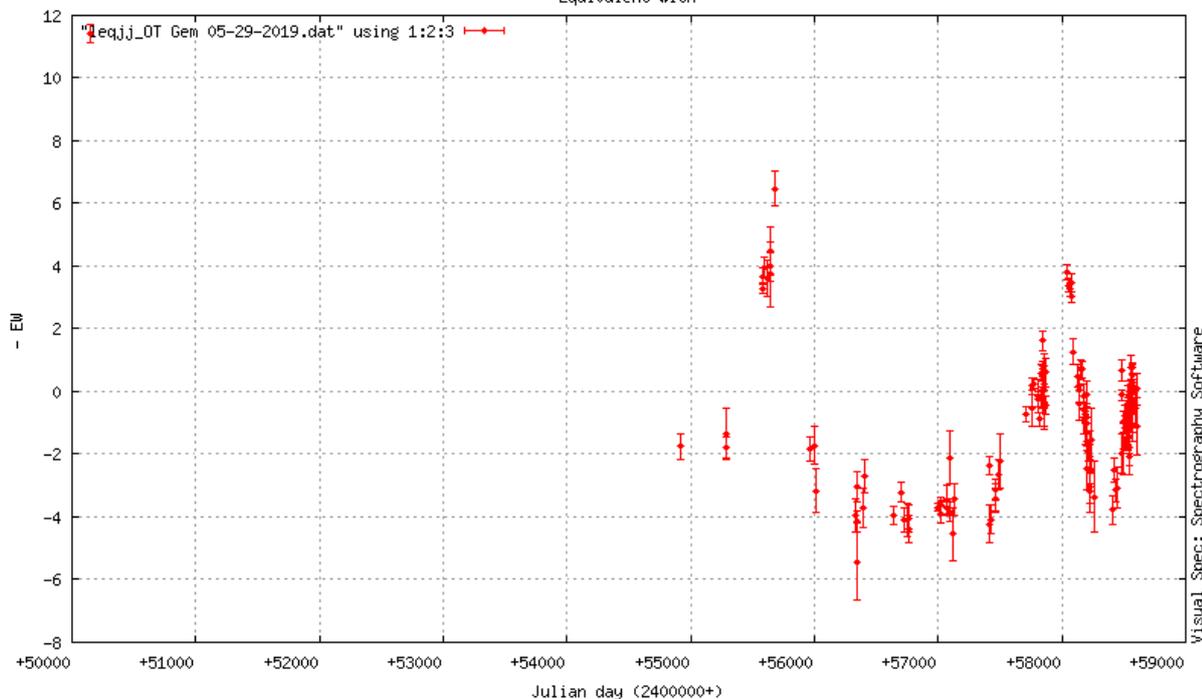

QR Vul 6 months

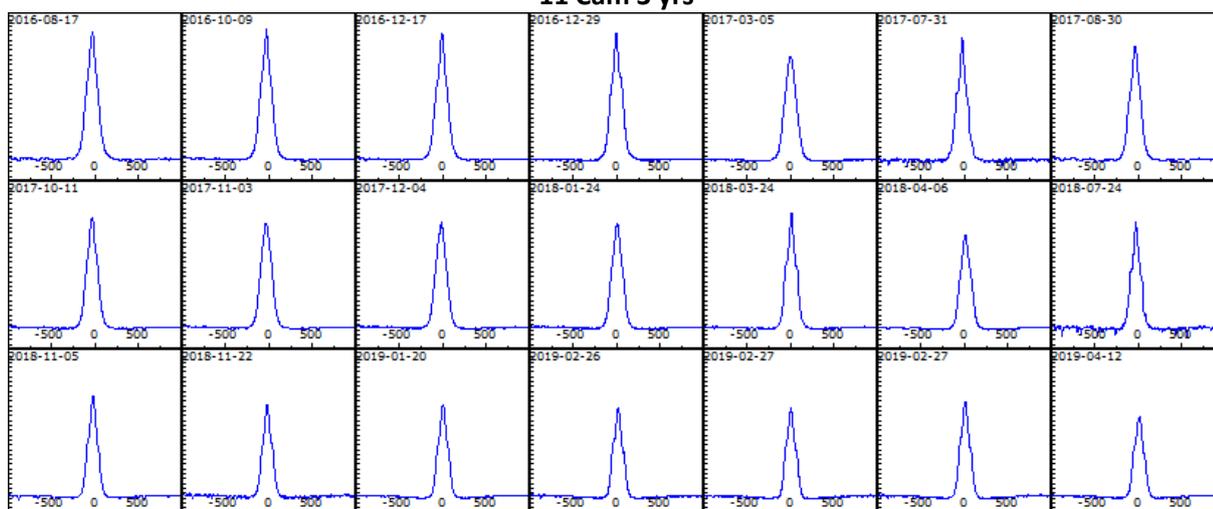

OT Gem 3 months

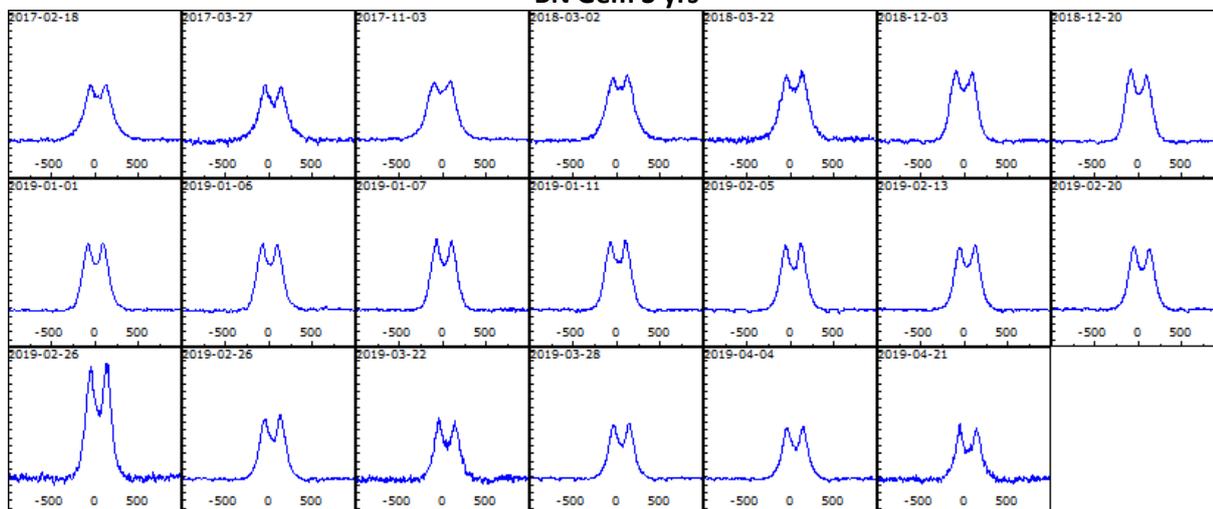

Equivalent With

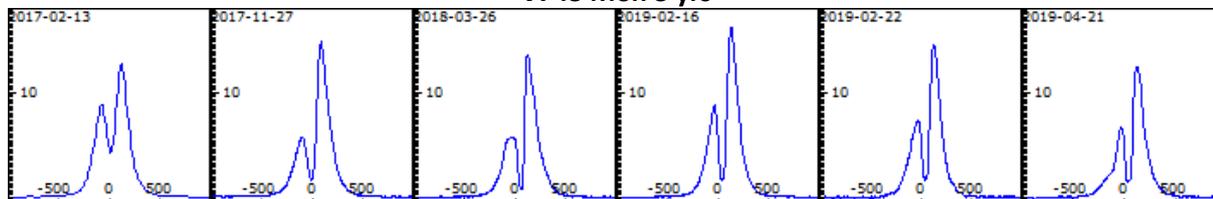

11 Cam 3 yrs

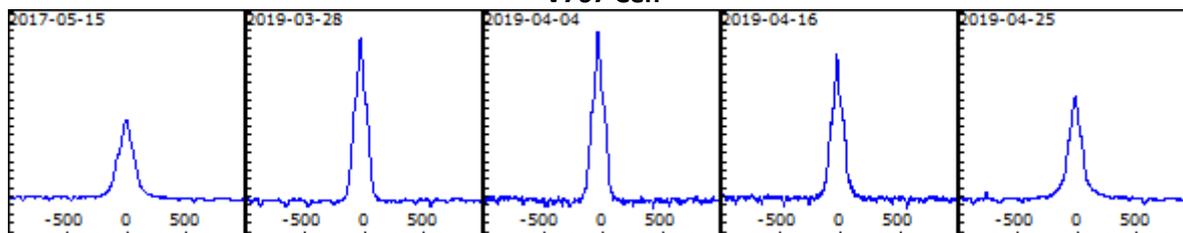

BN Gem 3 yrs

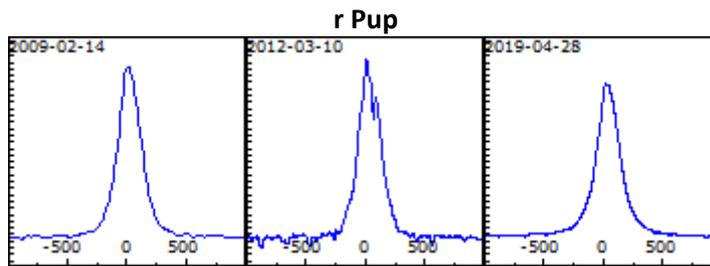

V743 Mon 3 yrs

V767 Cen

BeSS report Materiel & Method

For each star having a spectrum loaded in BeSS database for the monthly report the last six spectra in BeSS are displayed. A visual check is performed to detect any change in the H-alpha profile. Sometimes a copy/paste is needed for subtle evolutions.

For each star, which exhibits a change, the above series are generated with the following steps. Each spectrum is zoomed on the H-alpha line. Each profile is scaled on the continuum on a region around 6580 angströms. The x-axis is converted into Doppler velocity centered on H-alpha.

If too many spectra of the object are available, a shorter period of observation is displayed and thus the length period is indicated (1yr, 3yrs).

All data are processed with Visual Spec with dedicated function to automatically load BeSS spectra and automatize most of the above processing.
